

**Amendments to the Claims:**

Please amend claims 1, 10, and 18 to read as follows. This listing of claims replaces all prior versions and listings of claims in the application.

**Listing of Claims**

1. (currently amended) A method for tracking the status of a workflow, the method comprising:

instantiating an instance of a workflow on a computing device by a workflow user, the workflow user being assigned to a role in the workflow, the workflow having a plurality of workflow steps;

generating a weblog on a computing device to track an instance of the workflow, the weblog accessible to weblog members, wherein the weblog members include members who are workflow users and members who do not have a role in the instance of the workflow ~~are not workflow users~~, first weblog members with permission to view workflow status and weblog comments, and second weblog members with permission to view workflow status and view and post weblog comments;

configuring the weblog for a weblog member who does not have a role in the instance of the workflow to have permission to manually post an entry in the weblog; and

causing communication between the workflow and the weblog to automatically post an entry in the weblog to indicate that a workflow action has occurred, the entry being physically viewable on a display device by weblog members.

2. (original) The method of claim 1 wherein the workflow action comprises the completion of a workflow step.

3. (original) The method of claim 1 wherein the workflow action comprises the execution of a workflow exception.

4. (original) The method of claim 1 further comprising posting an entry in a personal weblog to indicate that the workflow action has occurred.

5. (original) The method of claim 1 further comprising providing a feed to an aggregator, the aggregator receiving entries from the weblog and at least one other instance of a weblog.
6. (previously presented) The method of claim 5 wherein providing a feed comprises providing Rich Site Summary or RDF Summary (RSS ) feed from a plurality of weblogs for a syndication.
7. (original) The method of claim 1 wherein the posting of an entry in the workflow weblog is made in response to a posting of an entry in a personal weblog.
8. (cancelled)
9. (cancelled)
10. (currently amended) A computing system for tracking the status of a workflow, the computing system comprising:  
a display screen;  
an input device to perform at least one of:  
receiving a client request to instantiate an instance of a workflow by a workflow user, the workflow user being assigned to a role in the workflow, the workflow having a plurality of workflow steps;  
receiving a client request to generate a weblog for tracking an instance of the workflow,  
and  
a server in communication with the display screen and the input device, the server executing a server application to generate the weblog, the weblog accessible to weblog members, wherein the weblog members include members who are workflow users and members who do not have a role in the instance of the workflow ~~are not workflow users~~, a weblog member who does not have a role in the instance of the workflow having permission to post an entry in the weblog, first weblog members with permission to view workflow status and weblog comments, and second weblog members with permission to view workflow status and view and post weblog

comments, the server employing an application to cause communication between the workflow and the weblog to automatically post an entry in the weblog to indicate that a workflow action has occurred, the entry being physically viewable on a display device by the weblog members.

11. (original) The computing system of claim 10 further comprising a remote server in communication with the server, the additional server storing a personal weblog and executing a server application to modify the personal weblog.

12. (original) The computing system of claim 10 wherein the server generates a first instance of a weblog and further comprising a remote server in communication with the server, the remote server executing an aggregator application to receive at least one entry from the first instance of a weblog and a second instance of a weblog.

13.-17. (cancelled)

18. (currently amended) A computer program product for use with a computer system, the computer program product comprising a non-transitory computer readable medium having embodied therein a computer program for storing data comprising:

program code for instantiating an instance of a workflow by a workflow user, the workflow user being assigned to a role in the workflow, the workflow having a plurality of workflow steps;

program code for generating a weblog to track an instance of the workflow, the weblog accessible to weblog members, wherein the weblog members include members who are workflow users and members ~~how are not workflow users who do not have a role in the instance of the workflow~~, first weblog members with permission to view workflow status weblog comments, and second weblog members with permission to view workflow status and view and post weblog comments;

program code for configuring the weblog for a weblog member who does not have a role in the instance of the workflow to have permission to manually post an entry to the weblog; and

program code for causing communication between the workflow and the weblog to automatically post an entry in the weblog to indicate that a workflow action has occurred, the entry being physically viewable on a display device by the weblog members.

19. (original) The computer program product of claim 18 further comprising program code for posting an entry in a personal weblog to indicate that the workflow action has occurred.

20. (original) The computer program product of claim 18 further comprising program code for providing a feed to an aggregator.

21. (original) The computer program product of claim 18 wherein the program code for posting an entry in the weblog is responsive to a posting of an entry in a personal weblog.

22. – 29. (cancelled)
